

IN THE CLAIMS:

1. (Original) A connector comprising:
 - an electrically conductive member having a longitudinal section at least a portion of which provides a cylindrical hollow end;
 - an electrically conductive pin positioned with respect to said electrically conductive member, a first part of said electrically conductive pin being substantially centrally located within said hollow end: and
 - a single-piece electrically insulating body surrounding said electrically conductive member and said electrically conductive pin.
2. (Original) The connector of Claim 1 wherein said connector is a right-angle connector.
3. (Original) The connector of Claim 1 wherein said electrically insulating body is provided with at least two spacing feet and at least one compressible leg.
4. (Original) The connector of Claim 1 wherein said electrically conductive pin has a second part projecting in a direction transverse to said first part.
5. (Original) The connector of Claim 4 wherein said second part of said conductive pin extends beyond a surface of said electrically insulating body.
6. (currently amended) The connector of Claim 5 wherein said electrically ~~insulating~~ conductive member has a longitudinal axis and has at least one leg extending in a direction transverse to said longitudinal axis and having a length sufficient to extend beyond a surface of said electrically insulating body.
